

JusPay Campus Hiring Process

General Guidelines & Prerequisites:

- **Eligibility Criteria:** A minimum score of 70% and above is required to clear and progress through each individual round.
- **Resume:** A highly polished and thoroughly updated resume is critical and will be evaluated across all interview rounds. Ensure it accurately reflects your technical proficiencies and system architecture experiences.

Round 1: MCQ Round

The initial screening round consisting of Multiple Choice Questions to test fundamental computer science knowledge.

Round 2: Coding Round

- **Timing:** Starts at 4:00 PM.
- **Duration:** 90 Minutes.
- **Results:** Announced by Friday.
- **Key Topics:**
 - **Data Structures & Algorithms (DSA):** Focus on Trees, Graphs, and Matrices. Leveraging your proficiency in Java or Python will be highly effective for tackling these structural problems efficiently.
 - **Core Computing Concepts:** Nodes, thread parallelism, multitasking, multithreading, and multiprogramming.
 - **System Understanding:** Locks and general system design fundamentals.

Round 3: Hackathon Part A

- **Timing:** Sunday, 6:00 PM to 9:00 PM.
- **Format:** You will be given 1 complex DSA question that includes 3 distinct conditions.
- **Evaluation:** The problem has 10 test cases, each carrying 3 marks.
- **Target:** You must successfully solve at least 7 to 8 test cases to be considered for the next round. Focus on writing clean, optimized code rather than brute-forcing the solution.

Round 4: Elimination Interview Round

- **Platform:** Google Meet (Scheduling depends on interviewer availability).
- **Duration:** 60 to 90 Minutes.
- **Key Topics:** Deep dive into DSA, Operating Systems (OS), and Core Computer Science Fundamentals. Expect questions that test your theoretical understanding alongside practical implementation.

Round 5: Hackathon Part B

- **Platform:** Chat-based coding platform conducted on Slack.
- **Timing:** Starts at 7:00 AM/PM and concludes around 7:00 PM - 8:00 PM.
- **Format:** Consists of two primary coding tasks:
 1. **Optimization:** Optimizing the code you submitted during Hackathon Part A.
 2. **New Implementation:** Solving completely new problem statements provided dynamically during the session.

Round 6: Systems Technical Round

A comprehensive technical interview testing your understanding of end-to-end system architecture.

Networking

- Differences between HTTP and HTTPS.
- Differences between TCP and UDP.
- RAM vs. HDD memory hierarchies.
- Parallelism vs. Concurrency.
- Methods and protocols for setting up network links.

Operating Systems

- Understanding Clock Speed.
- Networking concepts and certifications (e.g., CCNP).
- CPU Scheduling algorithms in OS.

System Design

- Low-Level Design (LLD) related to hardware interfaces.
- Practical hardware design: How a keyboard is designed.
- Under-the-hood execution: How a processor works.
- Application architecture: How a music player works. Your experience building full-stack, automated applications with features like intelligent assistants and demand forecasting will provide a very strong conceptual foundation for explaining these end-to-end system flows.

Technical & Logical Components

- Analysis of overall problem-solving and logical reasoning skills.
- Mathematical concepts: Puzzles, Probability, and Algebra.
- Memory management: How garbage collectors work, different types of memory, and caching mechanisms. Practical experience configuring in-memory caching layers like Redis will be highly relevant when explaining caching optimizations.

Round 7: Cultural Fit Round

- **Focus:** A mix of technical assessment and cultural/organizational fit.
- **Discussion Points:**
 - Your hobbies and extracurricular interests.
 - "Why do you want to join JusPay?"
 - "Why do you want to be a Software Development Engineer (SDE)?"
